

ASK YOUR DOCTOR ABOUT THE T790M TEST

It's important to learn as much as you can about your epidermal growth factor receptor positive (EGFR+) non-small cell lung cancer and the T790M test to prepare for what may come next in your journey. **By asking the right questions and getting the answers you need, you can have a plan in place for future decisions.**

AT YOUR NEXT VISIT, ASK YOUR DOCTOR THESE QUESTIONS AND JOT DOWN THE ANSWERS:

1. What is the T790M mutation?

2. When should we test my cancer for the T790M mutation?

3. How will we test my cancer for T790M?

- Biopsy (tumor biopsy)
- Blood test (liquid biopsy)
- Other _____

4. How soon should I expect the test results?

5. What are my options if my cancer tests positive for T790M?

6. What are my options if my cancer tests negative for T790M?

TIPS FOR TALKING WITH YOUR DOCTOR:

- Be open and honest. It's the best way to get the information you need
- Don't be afraid to talk about cancer progression—let your doctor know you'd feel better knowing your next steps. Make sure you understand the answers you get, and ask follow-up questions
- Come up with an action plan with your doctor so you can feel confident about your next steps
